

Dear friends, customers and partners,

We read everyday on newspapers and daily news the fast spread of Influenza A (H1N1). There's a high risk of being infected mainly in public areas and work centres.

We introduce our Hand Sanitizer ASEPTIMANS so that you can give protection to your workers and customers, as strongly recommended by the World Health Organization.

ASEPTIMANS is an automatic hand sanitizer with several big advantages comparing to other existing models in the market.

It is made of stainless steel, fulfilling all hygiene standards and it is used in industries of strong hygiene demands like meat industry, food in general and pharmaceutical.

Aseptimans is operated without any physical contact and by means of a photocell which is automatically activated when placing both hands underneath. It sprays sanitizing liquid on both hands. Being this a touch free dispenser, it avoids any risk of cross contamination.

ASEPTIMANS has a tank inside which can be refilled and which is locked with a key to avoid access of non authorized people. It has a capacity of 5000 doses and it operates with any existing sanitizing liquid. We supply also on demand refills of sanitizing liquid Aseptimans.
